

New Fryer Lid Assembly

Let's start with what has changed.

The new fryer lid includes an integrated alignment tab that serves as an aid during reassembly after cleaning.

Its purpose is simple:

It helps ensure the vent plate is positioned correctly.

As you can see, this feature guides the vent plate into the correct position during reassembly, making proper installation easier and more consistent. Everything else about the lid remains the same.

Side-by-Side Comparison

WITH TAB

WITHOUT TAB

When comparing the current and new lid assemblies side by side, you'll notice that the only difference is the addition of the alignment tab.

- Cleaning procedures remain exactly the same.
- Routine maintenance remains exactly the same.

The alignment tab simply provides guidance during reassembly to help ensure the vent plate is installed correctly every time. This enhancement is another example of Winston's commitment to continuous improvement making our equipment easier to maintain while helping ensure consistent performance.

Thank you for your continued partnership. If you have any questions, please contact your local Winston distributor or the Winston Customer Relations team.
